

Divot Recovery Mix

Proven combination for faster recovery powered by MaXand, Earthmax® and Milorganite

PRODUCT INFORMATION

Harrell's Divot Recovery Mix provides a solution for turf professionals struggling to manage the recovery of divots on practice tees, par 3 tees and fairways. This product is a proprietary blend of three ingredients that together have proven to significantly decrease recovery time of damaged turf and promote overall turf quality. Sand alone does little more than fill the void from divots or damaged areas. Harrell's Divot Recovery Mix provides the active soil components necessary for rapid turf recovery. This unique product is a blend of ingredients that provide plant-essential nutrients, increase soil CEC to hold them longer and improves uptake to the plant.

PRODUCT OVERVIEW

- Increases soil CEC
- Increases nutrient retention
- Improves nutrient uptake
- Manages moisture
- Reduces soil water repellency
- Accelerates seed germination

MAXAND FEATURES & BENEFITS:

- Proven to accelerate establishment of turfgrass on new and renovated greens
- Reduces recovery time from routine maintenance like aeration and verticutting
- Enhances root growth
- Reduces localized dry spots
- Holds essential nutrients in the rootzone longer

EARTHMAX® FEATURES & BENEFITS:

- Chelates Nutrients including Ca, Mg and Fe
- Diverse biological populations that colonize root systems and improve nutrient uptake
- Works with resident soil biology to enhance root growth and health

RESULTS AFTER 26 DAYS - GROWING SEASON

Harrell's Divot Recovery Mix

Sand

RESULTS AFTER 80 DAYS - LATE SEASON

Harrell's Divot Recovery Mix

Sand: Peat 70:30

MILORGANITE FEATURES & BENEFITS:

- Contains all 13 essential plant nutrients, including secondary nutrients like calcium and micronutrients like iron and zinc.
- Organically complex iron delivers long-lasting green
- Contains virtually no salts, so it will not burn plants – even in the hottest temperatures and driest conditions

RECOMMENDED RATES

Turf: Apply directly to divots and areas necessitating turf recovery, soil amending, sodding or as an amendment during seeding. Incorporate into soil as necessary.

Sports Turf: Use in Soccer and Lacrosse goal mouths during field reclamation periods.
