

Specticle®

**SPRING 2015
TRANSITION ZONE
GOLF**

For use within shaded region

Specticle® is a pre-emergent unlike any other and our *Performance Plus Promise** proves it. When you use Specticle, we promise you will see effective weed control. Our programs allow you increased flexibility. Ronstar® is also available as a pre-emergent option. Choose from the programs below that best fit your application needs.

Specticle delivers key benefits for spring weed control solutions:

- Specticle provides both pre-emergent and early post-emergent control of crabgrass
- Provides maximum flexibility with a wide spring pre-emergent application window – **8 weeks**
- Long residual pre-emergent control of goosegrass, crabgrass, doveweed and numerous broadleaf weeds including spotted spurge, Florida pusley and yellow woodsorrel
- Applicator-friendly formulation options that can easily be applied with little odor, non-staining, and no signal word required

Pre-Emergent-Only Programs

For optimal results, follow the timing as outlined below. There will be no need to tank mix post-emergent herbicides with Specticle except where weeds are already emerged.

PERFORMANCE PLUS PROMISE*

Bayer promises effective control of labelled weeds depending upon which one of the treatment programs you choose, or we will supply you with the additional Bayer product to provide effective control.

Pre + Post-Emergent Program

Celsius®, Tribute® Total and Revolver® can be used in conjunction with Specticle to provide post-emergent control of emerged weeds.

PROGRAM 1	PROGRAM 2	PROGRAM 3	PROGRAM 4 - High Sand Content	PROGRAM 5 - Pre/Post-emergent Control
Control of Crabgrass and Goosegrass through August	Control of Crabgrass and Goosegrass through August	Control of Crabgrass, Goosegrass and labelled broadleaf weeds through August	Control of Crabgrass, Goosegrass and labelled broadleaf weeds through August	Control of Crabgrass and labelled broadleaf weeds through September
